## Eurailscouts SIMs throughout Europe

27 June 2016

Our SIMs are specially designed for carrying out switch inspections and track geometry measurements. It is ideal for this purpose with its short distance between centres and low profile.

Today four of the SIMs (SIM09, SIM10, SIM11, SIM12) are up and running in different countries in Europe.

**Recently our SIM10 has also been approved for France and Sweden.**

Eurailscout is currently working on the SIM13 to be in production end of 2016. This SIM will be able to measure, as the others, the switch parameters, track geometry and deliver high definition video for track and switch survey
