Social Responsibility

In 2010 Eurailscout set the goal to realize a reduction of CO2 emissions of 20% in 2020.

The results of 2016 show that this goal has already been realized. More video conference meetings, public transport, cleaner cars and the use of renewable energy sources contributed to this fantastic result.

Eurailscout will remain focused on the reduction of CO2 emissions in the years to come.

Eurailscout reached level five of the CO2 awareness. This shows our responsible handling of natural resources to protect the environment.
